

VOLUMETRIC TECHNOLOGIES JOINS THE FOOD PROCESSING SUPPLIERS ASSOCIATION

January 10, 2012, Hampton, MN -- Volumetric Technologies (VTI), the industry's leading designer and manufacturer of filling machine solutions, has announced their membership in the Food Processing Suppliers Association (FPSA). FPSA is the largest American association for equipment manufacturers, suppliers, and service providers to the global food and beverage processing industries.

"This membership will enable us to continue to learn more about our customer needs, keep abreast of changes to the industry, and to partner with other great manufacturers that do similar work," says Beth Piper, Vice-President of VTI.

FPSA sponsors and produces the Process Expo, the biennial trade show where qualified buyers representing every market of the food industry from more than 75 countries meet face to face with suppliers showcasing the newest developments in processing technology. Exhibitors are able to demonstrate state-of-the-art food processing equipment in baking, beverage, dairy, prepared foods, meat/poultry and pharmaceutical industries. VTI will be exhibiting at Process Expo in 2013.

For more information on the Food Processing Suppliers Association, please visit their website at www.fpsa.org.
